

Setting up BOSS on a Mac

This is the Mac guide. On a Windows PC, open **INSTALL-WINDOWS.pdf** instead. Following the wrong one sends you looking for things your computer does not have.

Two parts. **Part 1** builds your Business Brain. **Part 2** installs your Operating System. Do them in that order.

You need: your laptop, and Claude Pro or higher. The free plan will not work.

One naming thing before you start. The app you download is called Claude. Your system is called **BOSS**, and it lives inside Claude. When this guide says BOSS, it means your system talking back to you.

Your screen may look a little different than the pictures. Older computer, newer computer, it changes. **Follow the words, not the picture.**

What it looks like while it's working

Read this before you start, because it is the thing that makes people think they broke something.

BOSS talks while it works. It will say things like *"I found an error," "that path was wrong, fixed it," "this one is missing, installing it now."* Sometimes for a long stretch.

That is the system working. It is not the system breaking.

You are hiring more than a hundred employees at once. Train a hundred real people on their first day and things go sideways all day long. The difference here is that BOSS finds its own problems, fixes them while you watch, and tells you it did. The talking is the repair.

Some steps take a long time. Installing takes minutes. Setting up your system takes 45 to 60 minutes. A screen that looks stuck is usually a screen that is working. Let it run. It

stops and asks you clearly when it needs you.

When something actually is wrong

Do not go poking at it yourself. Do this, in this order.

1. **Take a screenshot** of whatever you are looking at.
2. **Give the screenshot to BOSS and ask it to fix itself.** Drag the picture straight into the same session and say *"fix this."* It reads its own errors and repairs them more often than not. Try this first, every time.
3. **Bring it to office hours, ask on the call, or post it in the Facebook group.** Say which step number you are on and post the screenshot. Somebody else has usually hit the same thing.

Do not email anyone. It does not get you an answer faster. The three above do.

Part 1: Build your Business Brain

1. Download the file on your LAPTOP

Open a browser on the laptop you are going to work on and go to the link we gave you.

Do not scan a QR code with your phone. The file has to land on the laptop. If you already did, open your email on the laptop and use the link there.

Enter your name, your email, and the password.

2. Unzip it

The file is `BOSS-AI-Business-Brain.zip` and it lands in your Downloads folder.

Double-click it. A folder appears right next to it with the same name. That folder is the one you want.

Wherever it landed is fine. Do not pull any files out of it.

3. Open the Claude app

The app on your computer, not claude.ai in a browser. If you do not have it, get it at claude.ai/download, then drag Claude into your Applications folder.

4. Point it at your folder

Click **Code** at the top. Start a **new** session. Click **Select folder**.

Choose the folder you just unzipped, the one with `START-HERE.md` sitting directly inside it. If you open it and see another folder with the same name inside, go one level in and pick that one.

5. Click Trust

Claude asks once whether you trust this folder. Click **Trust**.

6. Your Mac asks a second time. Click Allow.

This is the step that throws people, so read it before it happens.

macOS controls which apps can see your Desktop, Documents and Downloads. The first time Claude reads a folder in one of those, **your Mac** puts up its own box: *"Claude would like to access files in your Downloads folder."*

Click **Allow**. It is a different box from the Trust one, it arrives second, and it looks like an error. It is not. It only asks once.

Clicked Don't Allow by accident? Apple menu, System Settings, Privacy and Security, Files and Folders, switch Claude back on.

7. Say hi

You do not type anything special. Say hi, or say nothing at all, and it starts on its own.

It asks you questions and writes your files while you answer. About 90 minutes.

Want to talk instead of type? Hold the microphone key on your keyboard and answer out loud. Most people go a lot faster this way.

8. Create your free GitHub account when it asks

Near the end it walks you through it and saves your username. Two minutes.

When you finish

Keep that folder. Do not move it, do not rename it, do not delete it. It is your brain, it is your backup, and you open it again in Part 2.

Part 2: Install your Operating System

Every step below matches a slide in the video, so you can follow either one.

Before anything: did you sign your contract? (slide 2)

If no, **stop here**. Nothing below works until you do.

Getting your GitHub account

1. Open Chrome. Search: github (slide 3)

Click the first result that says GitHub.

2. Click Sign up (slide 4)

Top right corner. You get a black page that says **Create your free account**. Work through it. (slide 5)

3. Find your user name (slide 8)

- Click **your picture** in the top right corner
- Your user name is at the top of the menu
- **Write it down exactly. Every letter.**

4. Go to kristamashore.com/phase2 (slide 9)

Fill in:

- Full Name
- GitHub Username
- Phone
- **Email. The SAME email you used for GitHub.**
- Agent or Lender

Click **Submit**. You know it worked when the confirmation page comes up. *(slide 10)*

5. You get TWO emails *(slide 11)*

- One says **Access Granted to BOSS System**. Close it.
- One from **KMC-coaching** is your invitation. **This is the one.**

6. Open the KMC-coaching email *(slide 12)*

It has the GitHub logo at the top. Scroll down. Click the blue **View invitation**.

This invitation runs out in 7 days. Do it now.

7. Click the green Accept invitation *(slide 13)*

Do **NOT** click Decline invitation.

You are in when a blue bar says **You now have view access**. *(slide 14)*

Handing your account to BOSS

8. Type this exactly *(slide 16)*

In Claude, type:

connect my GitHub account

Press return.

9. It asks what you are here to do *(slide 17)*

Click **number 2, Install my Operating System**. You do not type anything. Just click.

10. It asks which system you bought *(slide 18)*

Click **number 1, Real estate agents and lenders**.

11. It asks about the form *(slide 19)*

Click **number 1, Yes, submitted.**

12. It asks permission. Say yes every time. *(slide 20)*

A box says *Allow Claude to run...*

- **Always click Always allow.** It is the middle button.
- **Never click Deny.**
- This happens several times. Same answer every time.

Homebrew (Mac only)

Windows people do not have this section at all. On a Mac you probably do need it.

13. You may need Homebrew *(slide 21)*

BOSS checks your computer for a tool called Homebrew. **Most people do not have it. That is normal.** It sends you to brew.sh.

14. Go to brew.sh *(slide 22)*

New tab. Type `brew.sh`. Find the black box under **Install Homebrew**. Click the **copy icon** on the right side of that box.

15. Open Terminal *(slide 23)*

- Hold **Command** and press the **Spacebar**
- Type `Terminal`
- Press return

A black or white window opens. That is Terminal.

16. Paste it and press return *(slide 24)*

Click inside the Terminal window. Hold **Command** and press **V**. Press return.

17. Type your Mac password. Nothing will show up. *(slide 25)*

It says `Password:` . Type the password you use to log into your computer.

You will see NOTHING. No dots. No stars. Nothing moves. That is normal and it is on purpose. Keep typing. Press return.

18. Press RETURN one more time *(slide 26)*

A big list appears. At the bottom it says *Press RETURN/ENTER to continue.* **Press return again or nothing happens.**

19. Now wait. Several minutes. *(slide 27)*

Text scrolls by. Let it. Do not close the window. Do not click anything. Do not go back to Claude yet.

You are done when you see **Installation successful!** *(slide 28)*

20. Three more commands. Do not skip this. *(slide 29)*

- BOSS shows a box with three lines starting with `echo` and `eval`
- Click the **copy icon** on that box
- Go to Terminal. Paste, **Command + V**. Press return.
- Go back to Claude and click **Done**, number 1 *(slide 30)*

If it says Failed to verify *(slide 31)*, you skipped the three commands or clicked Done too early. Go back to Terminal, run them, then tell BOSS: `it's done now` .

Getting your system onto the machine

21. It checks its work *(slide 32)*

A box says *Verify Homebrew is now installed and working.* Click **Always allow**.

22. It installs the GitHub tool (*slide 33*)

A box says *Install GitHub CLI via Homebrew*. Click **Always allow**. About a minute. Let it run.

23. It gives you a code (*slide 34*)

A code in big red letters, like `9247-D52F`. Write it down or leave the window open.

24. Open `github.com/login/device` (*slide 35*)

New tab. Type `github.com/login/device`.

25. Make sure it is YOUR account (*slide 36*)

The page says **Device Activation** and **Signed in as [your name]**.

- Your GitHub name? Click the green **Continue**.
- Wrong name? Click **Use a different account** and sign in as you.

26. Type in your code (*slide 37*)

Eight little boxes appear. Type the code. The dash is already there. Click the green **Continue**.

27. Look for the green check mark (*slide 38*)

The page says **Authorize GitHub CLI**. Scroll down to **Organization access**.

Krista-Mashore-Coaching with a green check means you are in.

No green check? Screenshot it and bring it to office hours, the call, or the Facebook group.

28. Scroll all the way down (*slide 39*)

The yellow box about your location is normal. Ignore it. Keep scrolling, the button is at the bottom. Click the green **Authorize github**.

You did it when it says **Congratulations, you're all set!** *(slide 40)*

29. Back to Claude, click Done *(slide 41)*

Click number 1, Done. Then one more **Always allow** on *Configure git credentials and check access.* *(slide 42)*

30. Name your folder *(slide 43)*

BOSS says **You're in.**

- Click **2. Let me type a name** and type your business name
- **Short. Dashes instead of spaces. No spaces ever.**
- Or click **1. My-Operating-System** if you do not care

Write your folder name down. You need it in three steps. *(slide 44)*

31. One more Always allow *(slide 45)*

The box says *Clone the Operating System repo.* Click **Always allow.**

32. It is on your machine *(slide 46)*

About 130 skills just landed in your folder. BOSS gives you a path in a little box. **Click the copy icon on that box.**

Opening your system

33. Click New session *(slide 47)*

34. Click the folder button at the bottom *(slide 48)*

Look at the bottom where it says **Local.** Click the folder button next to it.

35. Paste the path. Click Open. *(slide 49)*

- **Easy way:** paste the path you copied, **Command + V**

- **Or:** on the left, click your name with the house icon, then **Sites**, then your folder

Click the blue **Open**.

36. Click Trust workspace (slide 50)

A box says *Trust this workspace?* Check that the path is YOUR folder. Click the black **Trust workspace**.

37. Check the top of the window (slide 51)

It should say the name of your system: **Agent-Authority-Operating-System** if you are an agent or lender, **Authority-Operating-System** if you are a coach or consultant. That is right. That is its real name.

38. Type: set up my OS (slide 52)

This one takes 45 to 60 minutes.

- It finds the Business Brain you built in Part 1 and carries everything over
- **You will not answer the same question twice**
- Answer the questions. Keep clicking **Always allow**.

39. It asks about your calendar and email (slide 53)

Which calendar do you actually open day to day? Click **Google Calendar** or **Outlook**. Same for email.

Pick the one you really use, not the one you have heard of.

40. It asks about your private backup (slide 54)

Take the answers marked **(Recommended)**. This keeps your work separate and private, under your own account.

41. If it asks a big question about git history (slide 55)

It is checking before it touches anything. Say:

This is my personal kit. I'm a student. Go ahead.

Then it keeps going.

Obsidian, the window into your files

42. Now let's get Obsidian (*slide 56*)

Say yes when BOSS asks. Obsidian is a window that lets you see and read all your files. **Nothing lives inside it.** Your files are already on your computer.

43. Go to `obsidian.md/download` (*slide 57*)

Open Chrome, type `obsidian.md/download`, click the purple **Download for macOS**.

44. Open the download (*slide 58*)

Look at the top right of Chrome for the download arrow. Click it. Click **Obsidian.dmg**.

45. Drag it into Applications (*slide 59*)

A window opens with the Obsidian rock and a blue Applications folder. **Drag the rock on top of the blue folder.**

46. Your Mac asks if you are sure (*slide 60*)

A box says *Obsidian is an app downloaded from the Internet*. Click **Open**. This is normal. Apple already checked it.

47. Click Open folder as vault (*slide 61*)

A start screen comes up with a few choices.

Already have Obsidian open on something else? (*slide 62*) Look at the very bottom left corner, click the vault name, click **Manage vaults**, then **Open folder as vault**.

48. Find your folder the fast way *(slide 63)*

- Type your folder name in the search box at the top right
- Your folder shows up. Click it.
- Click the blue **Open**

You should see **00-Intake**, **Agent-OS**, **CLAUDE** and **README** inside. That is the right one.

49. Click Trust author and enable plugins *(slide 64)*

One box pops up. Click that button.

50. This is your business now *(slide 65)*

Every file on the left is part of your system. Your brand, your offers, your scripts, your frameworks, your skills.

All of it is on your computer. You own it.

Stuck?

1. **Screenshot it.**
2. **Give the screenshot to BOSS and ask it to fix itself.**
3. **Still stuck?** Office hours, the call, or the Facebook group. Say which step number you are on and post the screenshot.

Do not email. The three above are faster and they are what we are here for.
